```
graph TD; A[USER LOGS IN] -- LOG-IN INFORMATION --> B[OBTAIN LOG-IN NAME]; B -- LOG-IN NAME --> C{IS LOG-IN NAME AN ALIAS?}; C -- YES --> D[LOOK UP ACTUAL USER IDENTITY]; C -- NO --> E[UPDATE ALL SUBSCRIBED CONTACT MANAGERS]; D --> E; E --> F(( ));
```

The flowchart illustrates the process of a user logging in. It begins with the step "USER LOGS IN", which leads to "LOG-IN INFORMATION". This information is then used to "OBTAIN LOG-IN NAME". The next step is a decision point: "IS LOG-IN NAME AN ALIAS?". If the answer is "YES", the process proceeds to "LOOK UP ACTUAL USER IDENTITY". If the answer is "NO", it proceeds to "UPDATE ALL SUBSCRIBED CONTACT MANAGERS". Both paths converge at this update step, which then leads to a terminal symbol (a circle). The entire process is labeled "USER IDENTITY DETECTOR" at the bottom.

Back Chat	
Sep 16 10:09	vanhovx it freezes on the dock/undock thing
Sep 16 10:10	webtesa final question - do you ever "kill" the tuner
Sep 16 10:10	webtesa by that I mean do a right click on the tuner icon, and choose exit
Sep 16 10:10	vanhovx when it freezes... i kill the virtula machine...
Sep 16 10:10	webtesa (do you use dock all/undock all?)
Sep 16 10:10	vanhovx not all nope...just ctrl d
Sep 16 10:10	webtesa what, via task manager?
Sep 16 10:10	vanhovx yes
Sep 16 10:10	webtesa ahhh - that's a new one using ctrl D
Sep 16 10:11	webtesa right - first off I may post that in the bug file
Sep 16 10:11	webtesa secondly, if you ever want to stop IC/tuner, please please don't do it via the task manager
Sep 16 10:11	webtesa best way is to have the Tuner window open - do a right click on the blue icon and choose open
Sep 16 10:12	webtesa then stop IC by doing a right click on the Interchange entry and choosing stop
